## Instructions for Installing Raindrop Gutter Guard

- 1) Sand inside lip of gutter (3/4") where blocking will be mounted. Wipe with Acetone.
- 2) Rip a piece of 1x PVC stock on a table saw to 3/8". This will get glued to inside lip of gutter
- 3) To glue the strip use GutterGlue (pricing below) and glue it to the inside lip as shown in picture below. Use micro clamps to hold in place while curing.
- 4) The gutter cover comes with a flange. We rip this off with table saw so it rests on back wall of gutter as shown in picture.
- 5) Mount cover with hex screws into the blocking.
